CSE6242/CX4242: Data & Visual Analytics

# Common visualization Issues & how to fix them

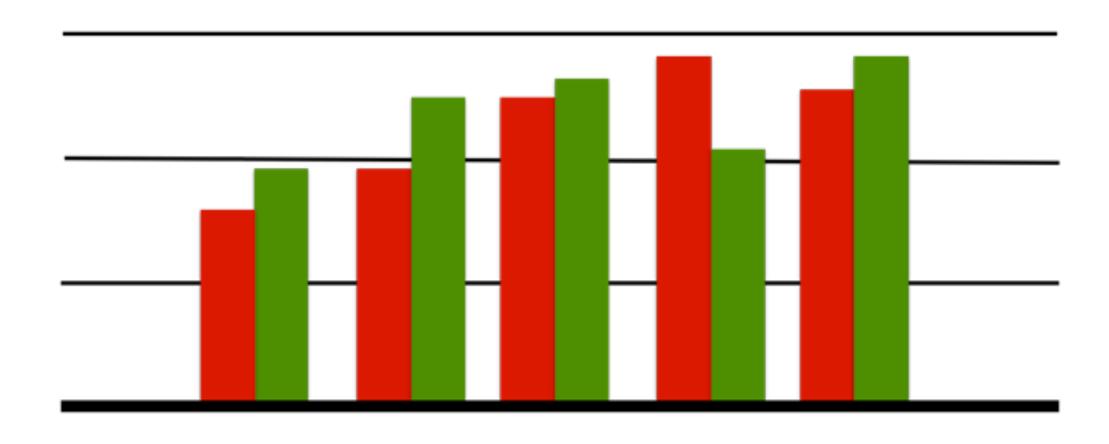

#### Duen Horng (Polo) Chau

Associate Professor, College of Computing Associate Director, MS Analytics Georgia Tech

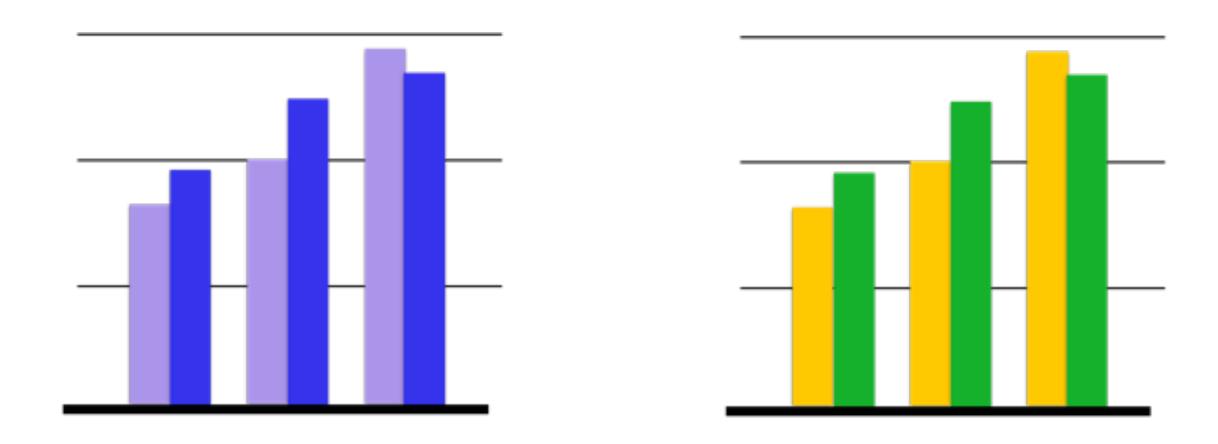

## THE WALL STREET JOURNAL **GUIDE TO** INFORMATION GRAPHICS THE DOS & DON'TS OF PRESENTING DATA, FACTS, AND FIGURES DONA M. WONG "INVALUABLE." -HOW DESIGN

Student of Edward Tufte

#### **Bar Charts**

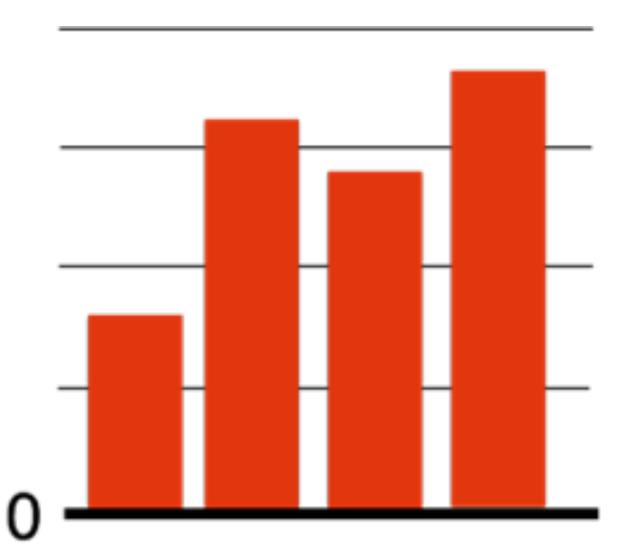

The color scheme reminds you of what?

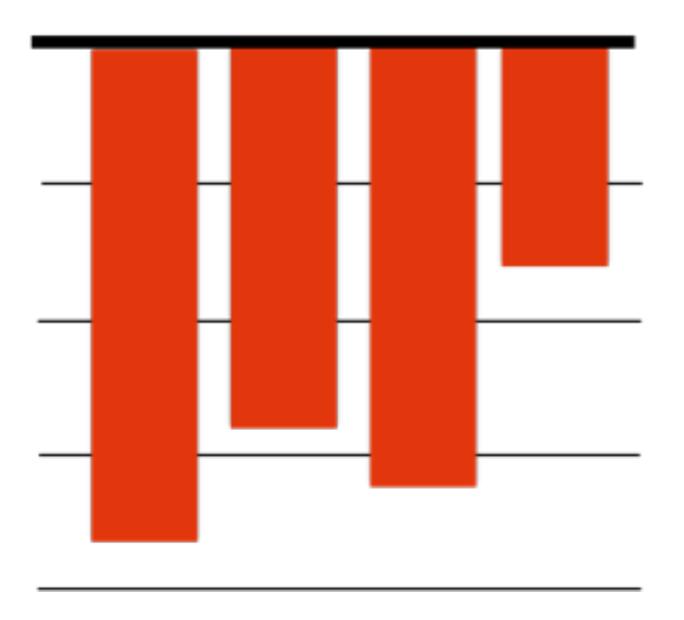

Better than Christmas (Use color brewer to find good color schemes)

## Company Profits

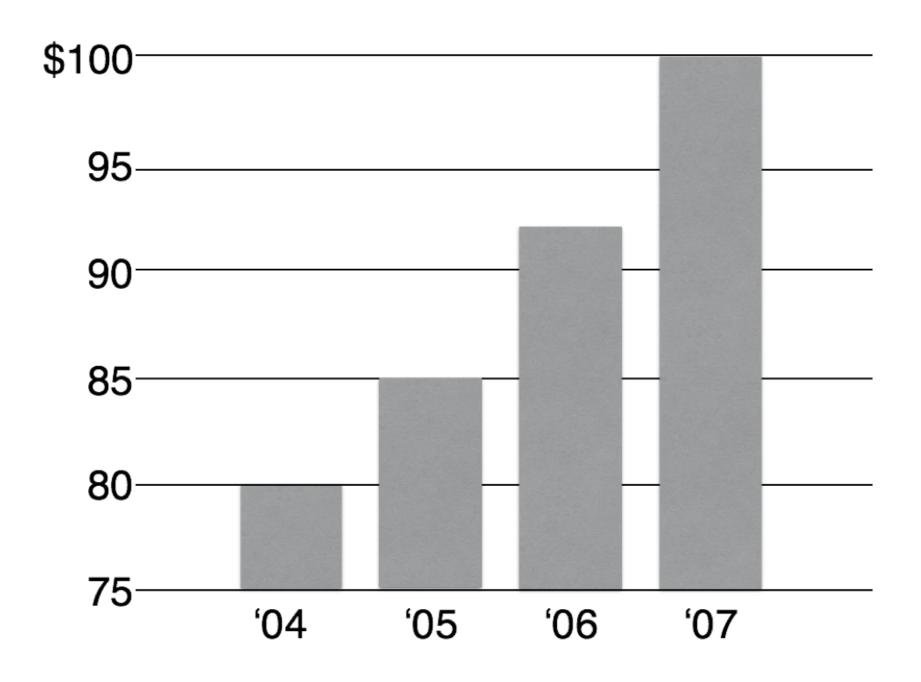

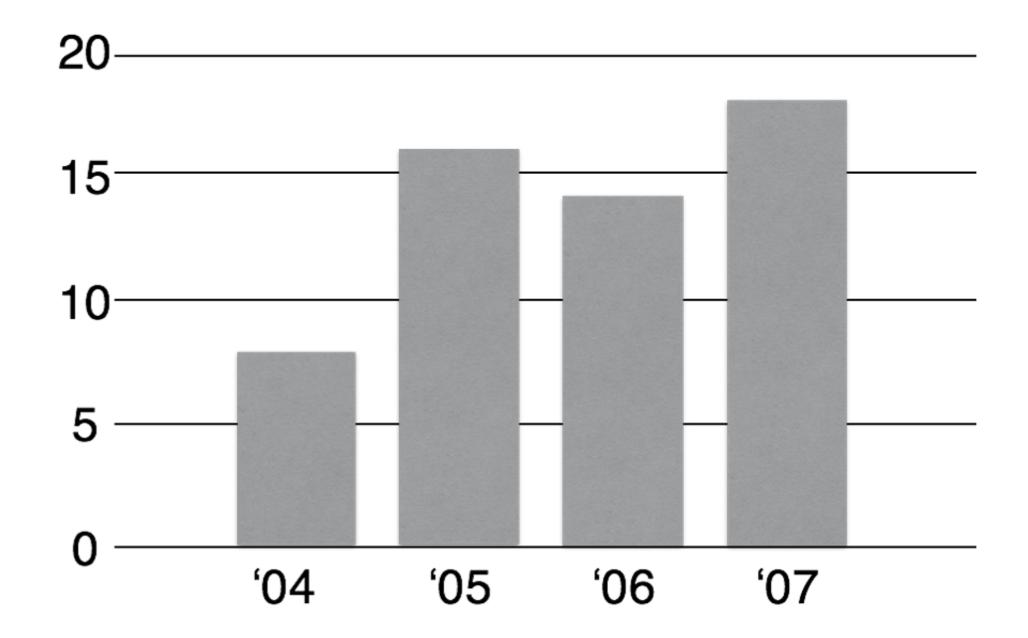

Don't show profits in red!!

Think carefully about your color choices.

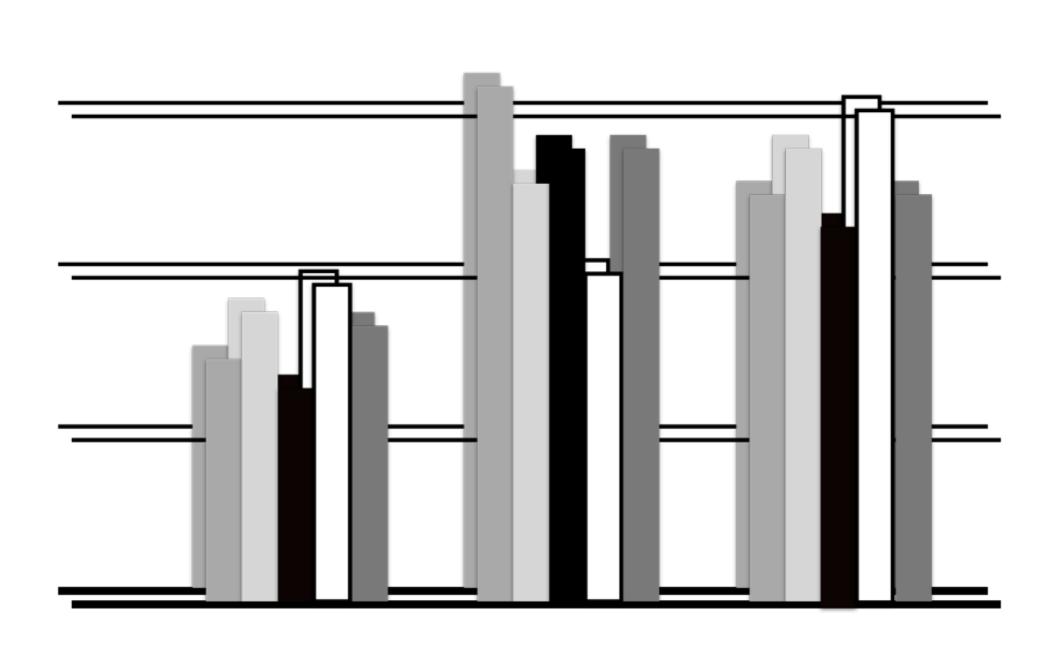

## Misleading Bar Charts

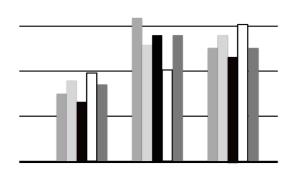

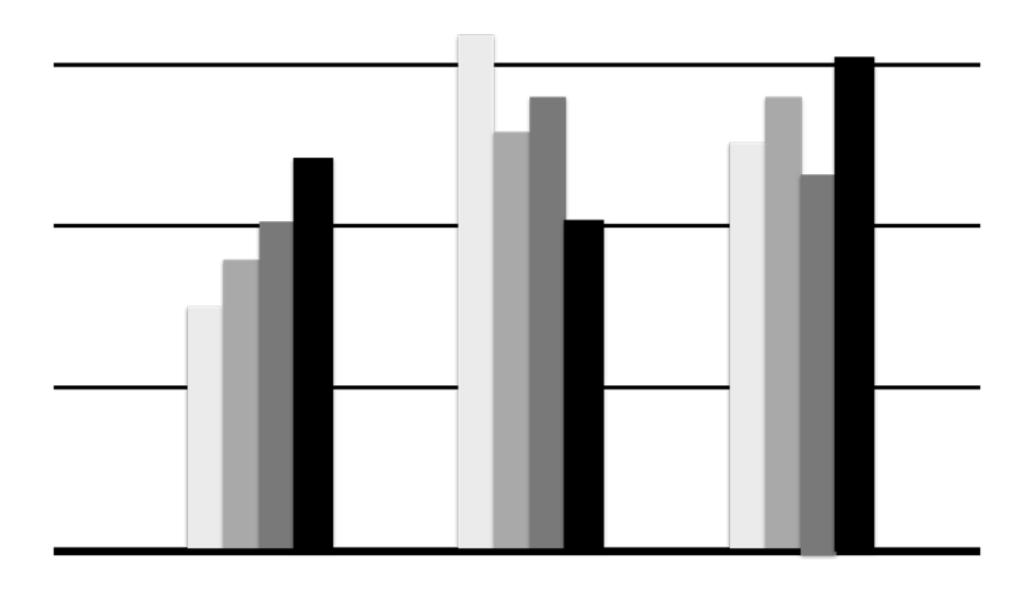

Vertical axis of bar charts should start at 0, almost always

## Disorienting color bars

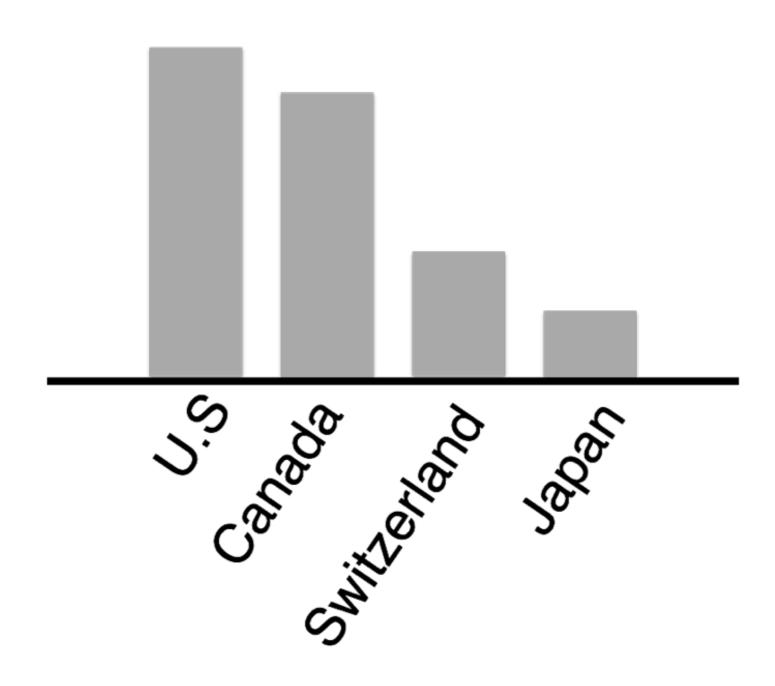

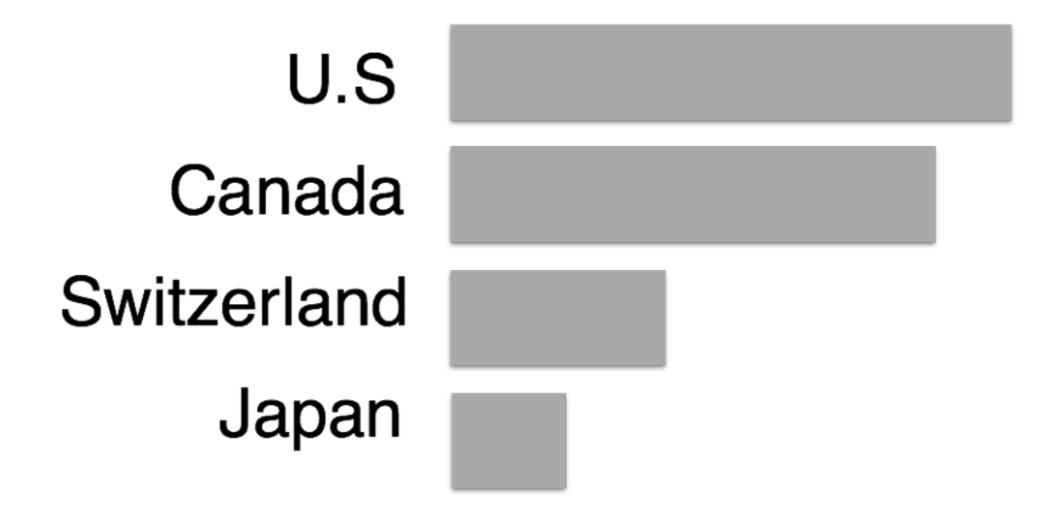

## Use gradation

#### Avoid Tilted or Rotated Labels

### Bars Can be Horizontal

When labels are hard to read, try horizontal layout.

Don't settle for the default.

#### **CPU Performance**

#### Xcode / NASA TetrUSS / Logic Pro / Vectorworks / Affinity Photo

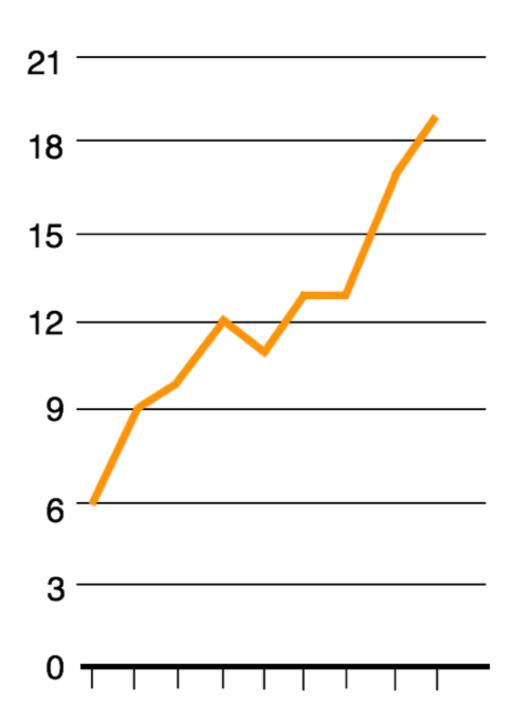

#### Faster project build7

14" model		16" model	
M1 Max with 10-core CPU	3.7x	M1 Max with 10-core CPU	2.1x
M1 Pro with 10-core CPU	3.7x	M1 Pro with 10-core CPU	2.1x
Quad-core Intel Core i7 13-inch MacBook Pro		8-core Intel Core i9 16-inch MacBook Pro	

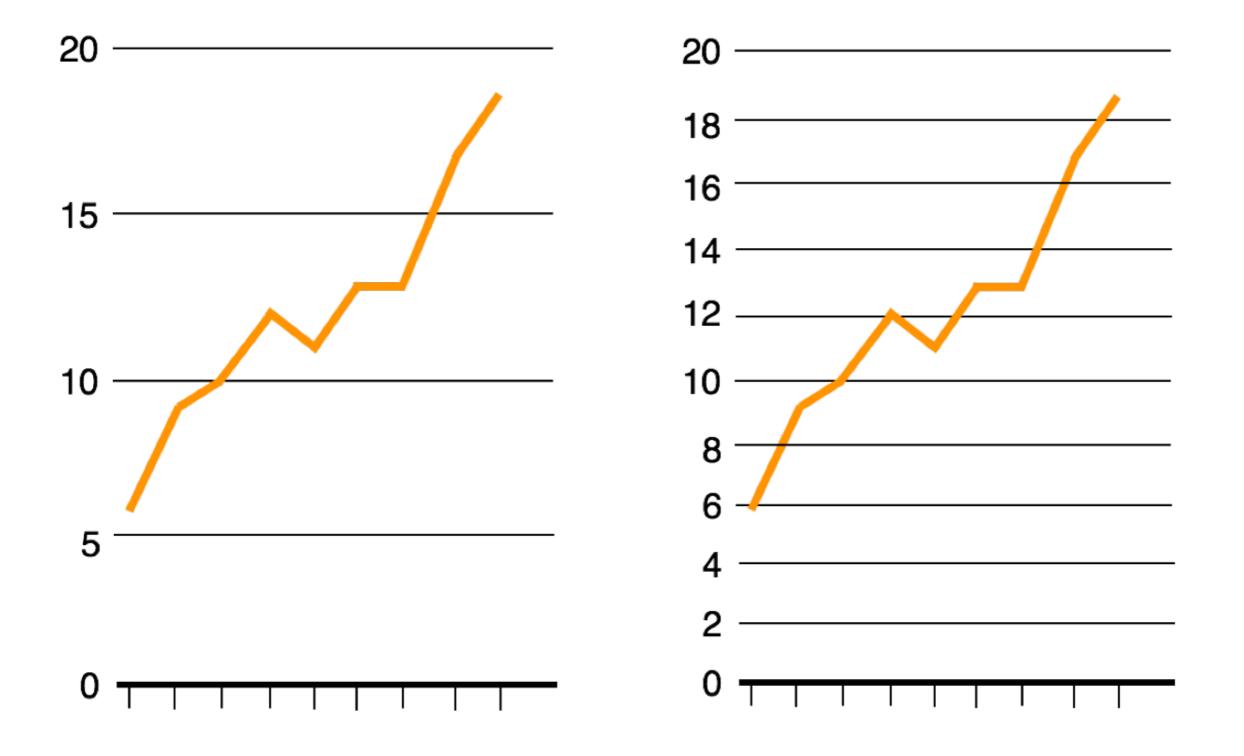

### Line Charts (a.k.a. fever lines)

Can you improve the tick labels (e.g., 3, 6, 9, etc)?

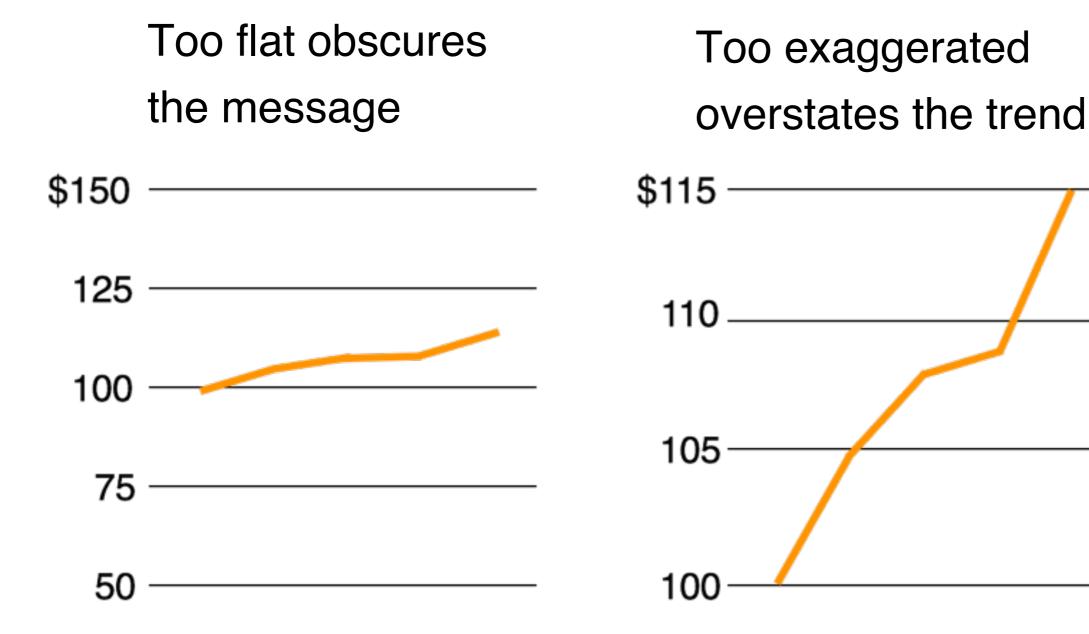

(Ignore the missing chart title and axis labels for now)

#### Use ticks at **common** intervals (e.g., 2, 5, 10, etc.)

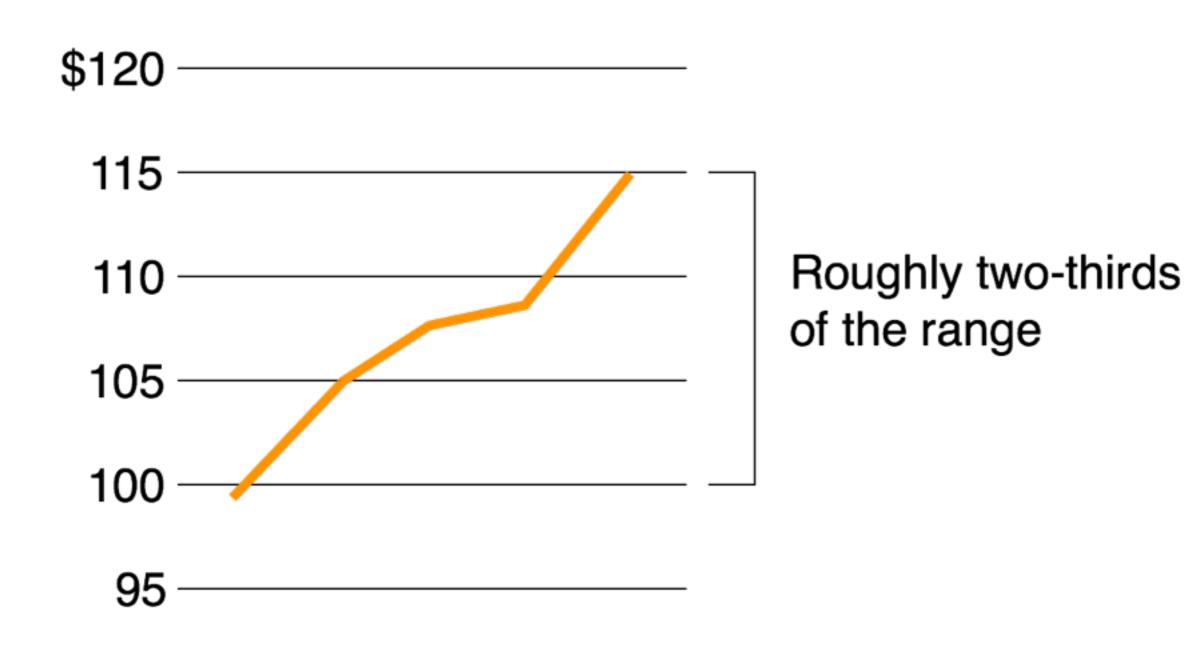

## Too flat or too steep?

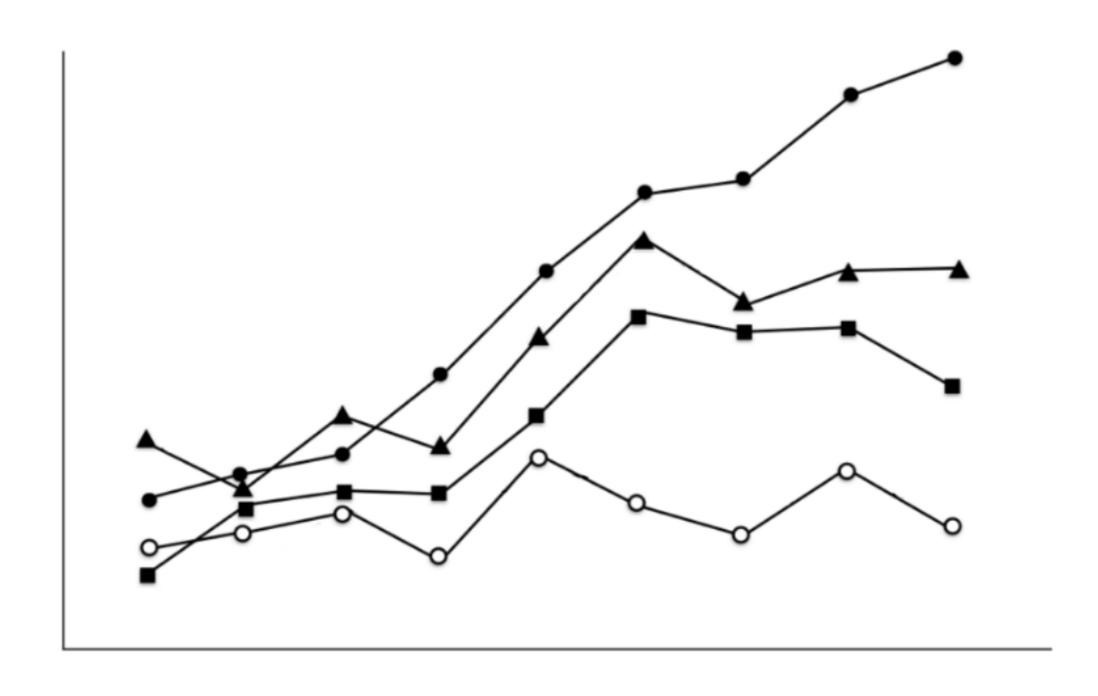

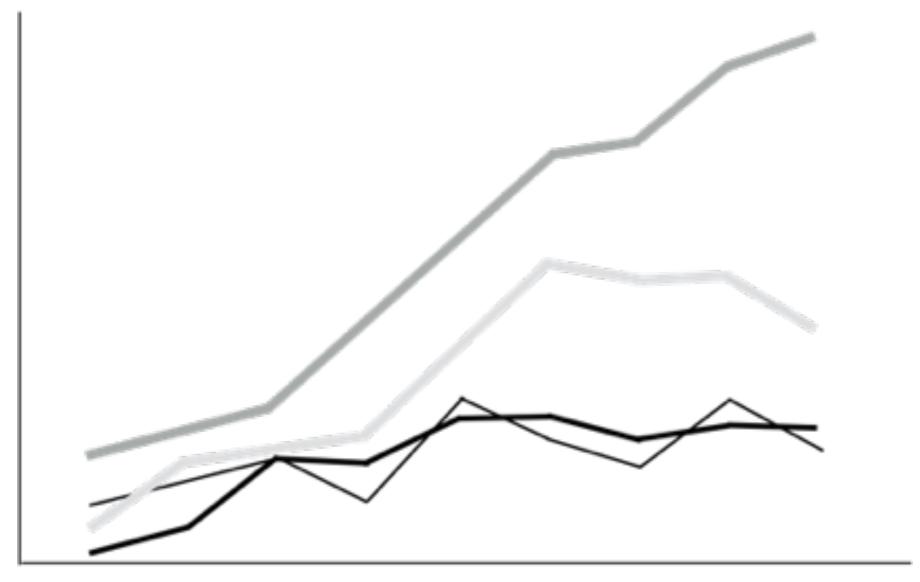

Note y-axis does not need to start at 0. Why not as bad as in the case of bar chart?

## Rule of Thumb

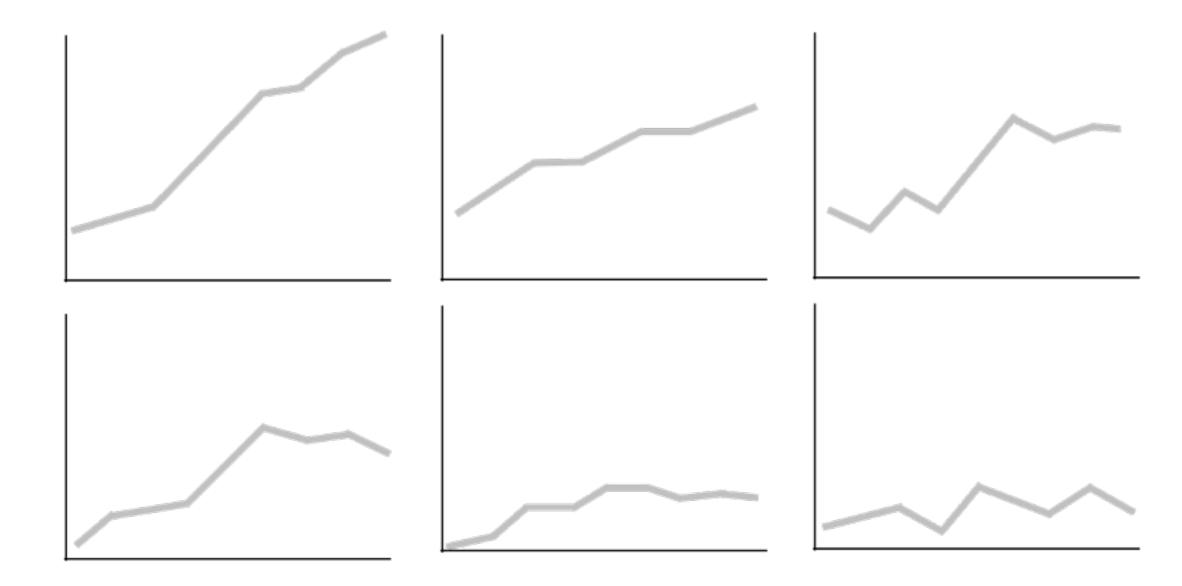

# Multiple Patterned Lines in one chart

Better?

Note the "double encoding" of *line width* and *brightness*. What if you have many lines you want to show?

"Small Multiple" - Edward Tufte Better than overlapping (sometimes)

"a series or grid of small similar graphics or charts, allowing them to be easily compared" 20

#### **Tables**

Name	Data	Data	Data
Company A	0.0	0.0	0.0
Company B	0.0	0.0	0.0
Company C	0.0	0.0	0.0
Company D	0.0	0.0	0.0

### What visual aspects to improve?

(Ignore the meaning of the values for now)

# What's the problem with making everything **bold** or *italic*?

DIENER PRISENTS A PIXAR HEM

#### When everyone is special, no one is!

Name	Data	Data	Data
Company A	0.0	0.0	0.0
Company B	0.0	0.0	0.0
Company C	0.0	0.0	0.0
Company D	0.0	0.0	0.0

Name	Data	Data	Data	Data	Data	Data
Company A	0.0	0.0	0.0	0.0	0.0	0.0
Company B	0.0	0.0	0.0	0.0	0.0	0.0
Company C	0.0	0.0	0.0	0.0	0.0	0.0
Company D	0.0	0.0	0.0	0.0	0.0	0.0
Company E	0.0	0.0	0.0	0.0	0.0	0.0
Company F	0.0	0.0	0.0	0.0	0.0	0.0
Company G	0.0	0.0	0.0	0.0	0.0	0.0
Company H	0.0	0.0	0.0	0.0	0.0	0.0

#### A lot of "chart junk". Low "data to ink" ratio (Edward Tufte)

Name	Data	Data	Data	Data	Data	Data
Company A	0.0	0.0	0.0	12.0	0.0	0.0
Company B	0.0	0.0	0.0	11.0	0.0	0.0
Company C	0.0	0.0	0.0	10.0	0.0	0.0
Company D	0.0	0.0	0.0	9.0	0.0	0.0
Company E	0.0	0.0	0.0	8.0	0.0	0.0
Company F	0.0	0.0	0.0	7.0	0.0	0.0
Company G	0.0	0.0	0.0	6.0	0.0	0.0
Company H	0.0	0.0	0.0	5.0	0.0	0.0
Company I	0.0	0.0	0.0	4.0	0.0	0.0
Company J	0.0	0.0	0.0	3.0	0.0	0.0
Company K	0.0	0.0	0.0	2.0	0.0	0.0
Company L	0.0	0.0	0.0	1.0	0.0	0.0

#### Higher "data to ink" ratio

### Problems?

Name	Data	Name	Data
Company A	1000	Company A	10.82
Company B	900	Company B	9.49
Company C	80	Company C	8
Company D	7	Company D	7.4

Name	Data	Name	Data
Company A	10.82	Company A	10.8
Company B	9.49	Company B	9.5
Company C	8	Company C	8.0
Company D	7.4	Company D	7.4

#### **Beautiful Publication-quality LaTeX Tables**

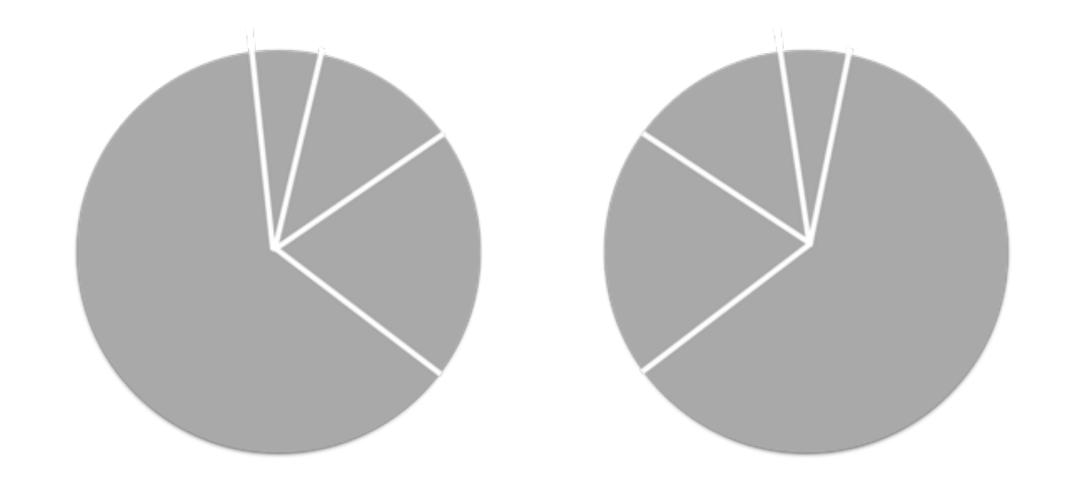

slices	abs. error (%)		abs. error (slices)	
	avg.	max.	avg.	max
< 5000	7.4	73.5	116	625
5000-10000	3.1	27.2	209	1807
10000-15000	2.4	15.6	297	2133
> 15000	1.8	9.0	317	1609

## Practitioners' Guide

**Colors**: start with black & white, then add colors, carefully Forces you to focus on content and layout

Fonts: sans-serif generally easier to read

(On Mac: Helvetica is great start)

Animation: start with no animation, then add meaningful ones

# Practitioners' Guide: Use Pictures and Videos

"Pictures" include tables, diagrams, charts, etc.

- Pictures often more succinct & memorable
- People like pictures and love movies

#### And show them ASAP!

Once people fall asleep, it's hard to wake them up! If you have good stuff, show them now.

**Example** 

#### Scene Completion Using Millions of Photographs

James Hays Alexei A. Efros Carnegie Mellon University

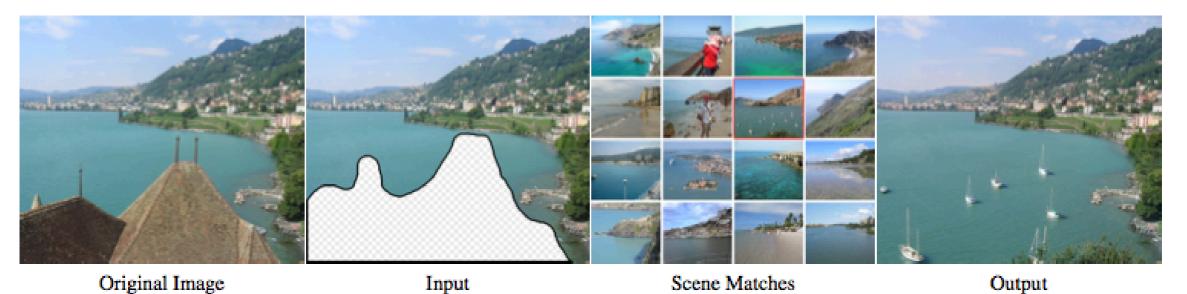

Figure 1: Given an input image with a missing region, we use matching scenes from a large collection of photographs to complete the image.

#### Abstract

What can you do with a million images? In this paper we present a new image completion algorithm powered by a huge database of photographs gathered from the Web. The algorithm patches up holes in images by finding similar image regions in the database that are not only seamless but also semantically valid. Our chief insight is that while the space of images is effectively infinite, the space of semantically differentiable scenes is actually not that large. For many image completion tasks we are able to find similar scenes which contain image fragments that will convincingly complete the image. Our algorithm is entirely data-driven, requiring no annotations or labelling by the user. Unlike existing image completion methods, our algorithm can generate a diverse set of results for each input image and we allow users to select among them. We demon-

There are two fundamentally different strategies for image completion. The first aims to reconstruct, as accurately as possible, the data that should have been there, but somehow got occluded or corrupted. Methods attempting an accurate reconstruction have to use some other source of data in addition to the input image, such as video (using various background stabilization techniques, e.g. [Irani et al. 1995]) or multiple photographs of the same physical scene [Agarwala et al. 2004; Snavely et al. 2006].

The alternative is to try finding a plausible way to fill in the missing pixels, hallucinating data that could have been there. This is a much less easily quantifiable endeavor, relying instead on the studies of human visual perception. The most successful existing methods [Criminisi et al. 2003; Drori et al. 2003; Wexler et al. 2004; Wilczkowiak et al. 2005: Komodakis 2006l operate by extending

#### GAN Lab: Understanding Complex Deep Generative Models using Interactive Visual Experimentation

Minsuk Kahng, Nikhil Thorat, Duen Horng (Polo) Chau, Fernanda B. Viégas, and Martin Wattenberg

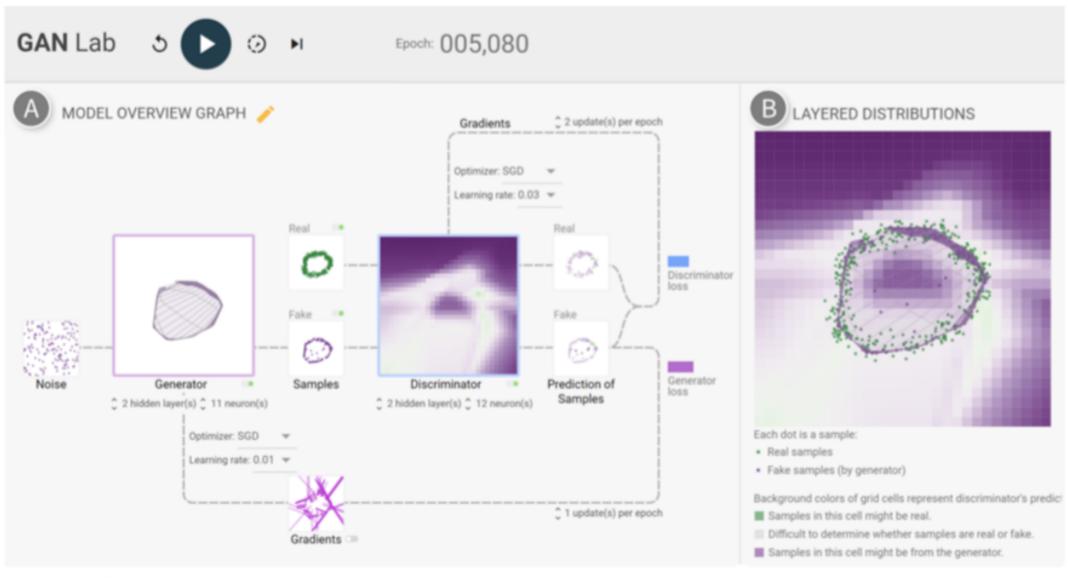

Fig. 1. With GAN Lab, users can interactively train Generative Adversarial Networks (GANs), and visually examine the model training process. In this example, a user has successfully used GAN Lab to train a GAN that generates 2D data points whose challenging distribution resembles a ring. **A.** The *model overview graph* summarizes a GAN model's structure as a graph, with nodes representing the generator and discriminator submodels, and the data that flow through the graph (e.g., fake samples produced by the generator). **B.** The *layered distributions* view helps users interpret the interplay between submodels through user-selected layers, such as the discriminator's classification heatmap, real samples, and fake samples produced by the generator.

Abstract—Recent success in deep learning has generated immense interest among practitioners and students, inspiring many to learn about this new technology. While visual and interactive approaches have been successfully developed to help people more easily

## Practitioners' Guide: Additional Tips for Researchers

#### Crown-jewel pictures are important

- Overview of what readers is going to get cut to the chase
- People skim and look at "interesting" things first
- Reviewers are busy and sleepy (read 5-10 papers per conference) it's refreshing to read an interesting paper

#### How to do it?

- Use your most impressive figure
- Can be similar to another figure shown later

## Figures should be self-contained

#### Why?

- Don't make people go back and forth between text & figure
- Bad figures means bad first impression (reject!)

#### How to fix?

 Succinctly describe your main (take-away) messages

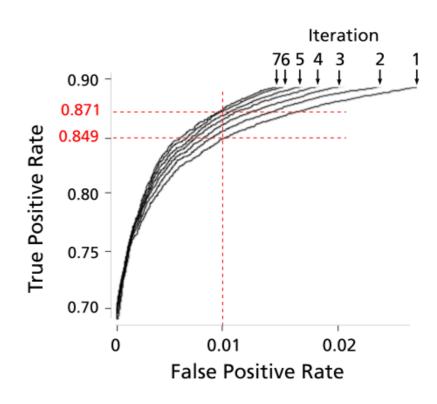

Figure 8: ROC curves of 7 iterations; true positive rate incrementally improves.

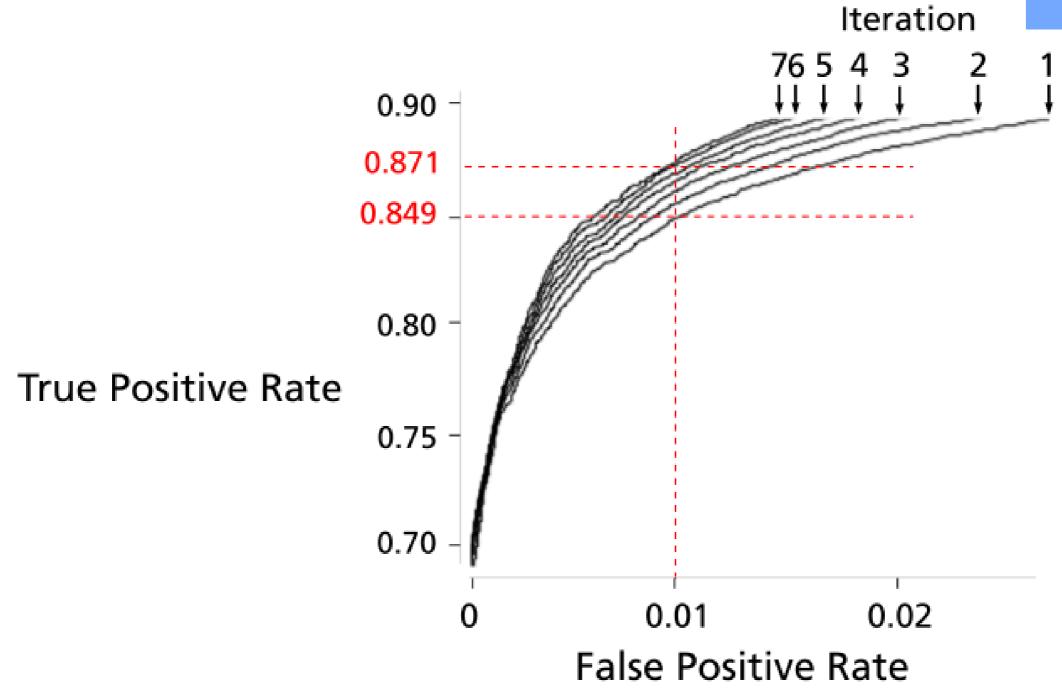

Figure 8: ROC curves of 7 iterations; true positive rate incrementally improves.

## Use legible fonts.

## If people can't see it, they won't appreciate it.

For printed materials, print them out and check!

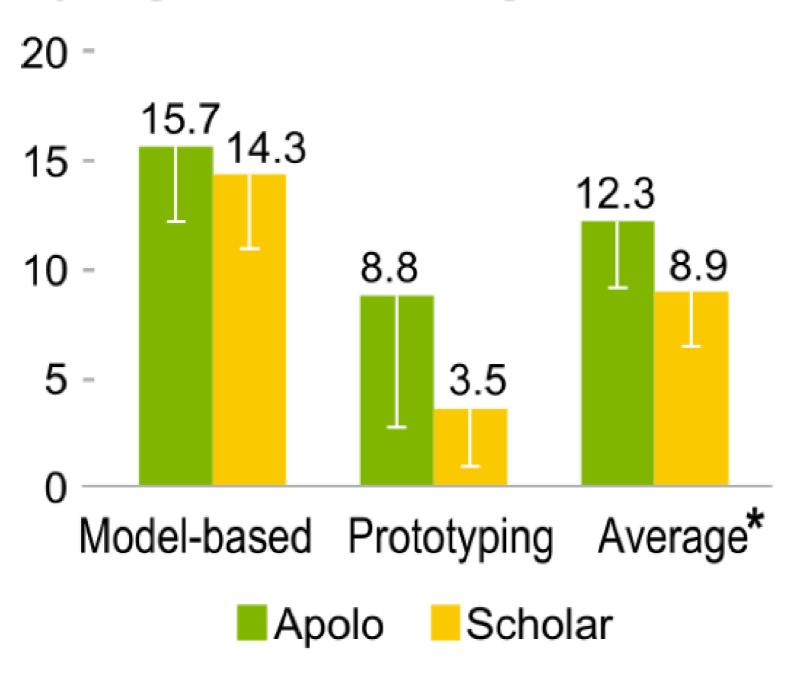

Rule of thumb: about 7 lines of text on a slide.

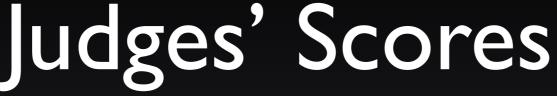

## Redesign figures for presentation

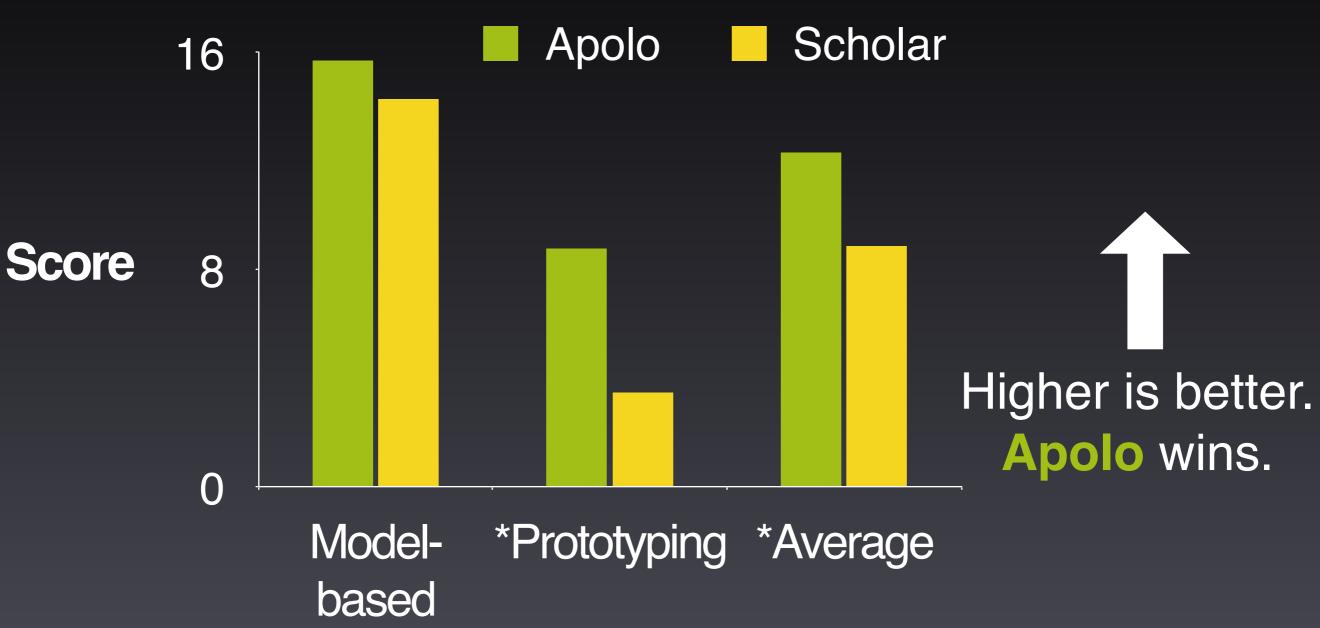

Designing for print is different from designing for the screen

- Resolution (which is higher?)
- Levels of details (people mostly want a few "take-away" messages from your talk)

#### a) Avg Combined Judges' Scores

<sup>\*</sup> Statistically significant, by two-tailed t test, p < 0.05

# Great Work Destroyed by Poor Presentation

Bad color schemes
Bad, tiny fonts
Too much animation
Too much data

can you read this?

100 times faster!

Don McMillan: Life After Death by PowerPoint <a href="http://www.youtube.com/watch?v=lpvgfmEU2Ck&feature=player\_embedded">http://www.youtube.com/watch?v=lpvgfmEU2Ck&feature=player\_embedded</a>
